

HARDWOOD CLEANER & BRIGHTENER

Before Part 1

Cleaned with
Part 1 & 2

Treated with
Ipe Oil™

When it comes to deck building, we all want it to last a long time. We want the natural wood color to show and sometimes even a grey deck appearance is our preference. However, with time, wood decking gets dirty and loses its' luster and natural hardwood appeal.

DeckWise® Wood Deck Cleaner (Part 1) and Brightener (Part 2) remove dirt and greying in preparation for re-oiling and applying finishes such as Ipe Oil™. These concentrated powders are formulated specially to cleanse and brighten exterior wood decks, wood fences, patios, terraces, wood siding, benches, chairs, and other outdoor wood items.

**STEP 1: Sweep and clean dirt and debris from wood surface**

Before staining or oiling wood decks and other wood items, always clean surfaces and gaps with a broom or brush. Once debris is eliminated, the process of cleaning and brightening can begin.

**STEP 2: Thoroughly rinse wood and keep wet**

After all debris and dirt are removed from your deck or wooden item, rinse thoroughly. It is important to not let water stand or pool on the wooden surface. To insure this, sweep or brush excess water from deck or wood item.

**STEP 3: Mix 1/3rd cup of Cleaner Part 1 with 1 gallon hot water**

Measure out 1/3rd cup of DeckWise[®] Wood and Deck Cleaner Part 1. Next, mix Cleaner Part 1 with one gallon of hot water thoroughly. For optimal results, make sure all particles are dissolved before applying to wood or deck.

**STEP 4: Thoroughly scrub wood with Cleaner Part 1, then rinse**

Apply generous amount of Cleaner Part 1 with bristle brush to create suds. Use a long handled brush for decking, and a handheld for smaller items. Scrub with the grain of the wood to loosen deep dirt particles. Rinse thoroughly.

**STEP 5: Mix 1/3rd cup of Brightener Part 2 with 1 gallon hot water**

Dilute 1/3rd cup of Brightener Part 2 with one gallon of hot water for the second step. Brightener particles should also be diluted as much as possible before use.

**STEP 6: Scrub wood with Brightener Part 2, rinse and let dry**

Repeat Step 4; Scrub a plentiful amount of Brightener Part 2 with a brush into a lather going with the wood grain. Rinse well and let decking dry thoroughly before applying stain or oil finish.

**STEP 7: Once deck is dry, apply oil finish or stain**

Now that your deck or wood item is cleaned and brightened, it's time to apply a finish. We recommend Ipe Oil[™] Hardwood Deck Finish as an oil-based finish for natural hardwoods.

Ipe Oil[™] Hardwood Deck Finish is an oil-based natural wood finish. It is specifically formulated, using trans-oxide pigments, to protect and preserve the natural beauty of exterior hardwood decks. Ipe Oil[™] Hardwood Deck Finish provides excellent penetration of even the densest hardwoods with minimal raising of the grain. It protects and conditions the wood while maintaining a completely natural appearance. For exceptional results on Ipe, Tigerwood, Cumaru and other exotic hardwoods, Ipe Oil[™] is the best solution.

Deck Cleaner & Brightener Product Info:

- Cleans and brightens outdoor/external wood and removes dirt and greying
- Always clean before oiling and finish staining of wood surfaces
- Outstanding for all decking maintenance
- Concentrated powders provide maximum strength
- Biodegradable, easy to handle and safe
- Concentrated powders provide maximum strength
- Each 16 oz. container cleans or brightens close to 500 sq. ft.

Product Applications:

- Hardwood Decks
- All Exterior Wood Surfaces
- Fences
- Wood Railings
