U.S. PATENT #D623,913 - OTHER U.S. AND INTERNATIONAL PATENTS PENDING

LOCKING DOG

HARD ANODIZED AIRCRAFT GRADE ALUMINUM

ADJUSTABLE JOIST PINS FOR USE ON UP TO 3.5" JOISTS

CAM

SMOOTH JOIST PINS FOR NON-MARRING APPLICATIONS

KNURLED JOIST PINS FOR INCREASED GRIPPING

ERGONOMIC HARDWOOD HANDLE

REVERSIBLE Reversible handle for areas with limited space

REMOVE KNURLED KNOB TO REVERSE HANDLE

EASY ONE MAN OPERATION

1 Lock Hardwood Wrench™ tool onto the joist. Tip of the locking dog should be approximately 1" away from deck board. This will allow cam to move fluidly and lock with ease. If cam does not lock easily or requires much force, the Hardwood Wrench is most likely too close to the board you are installing.

2 Swing handle until board is straightened. Again, the handle should swing easily with little effort. If not, check positioning of the tool as described in step #1.

3 Locks in place for hands free holding. Once locked, fasten deck board and move to the next joist.
